

# How to auto backup database in Stand Alone Application?

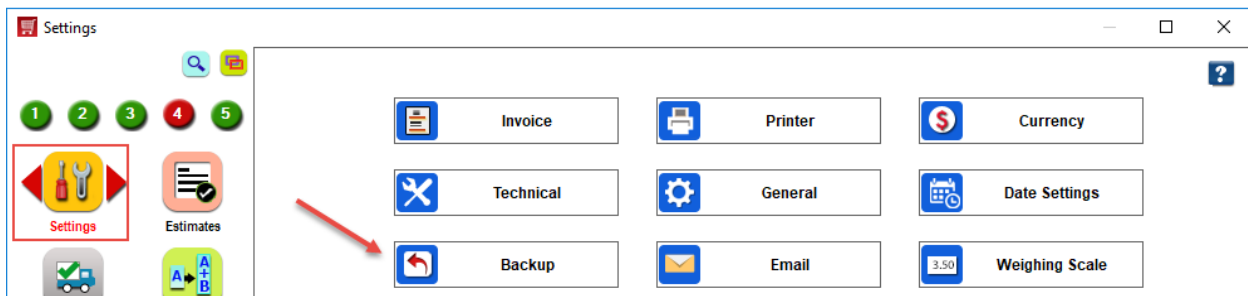

HDPOS smart v2 Tutorials

To take back up of database when application is closed, you need to do the following settings.

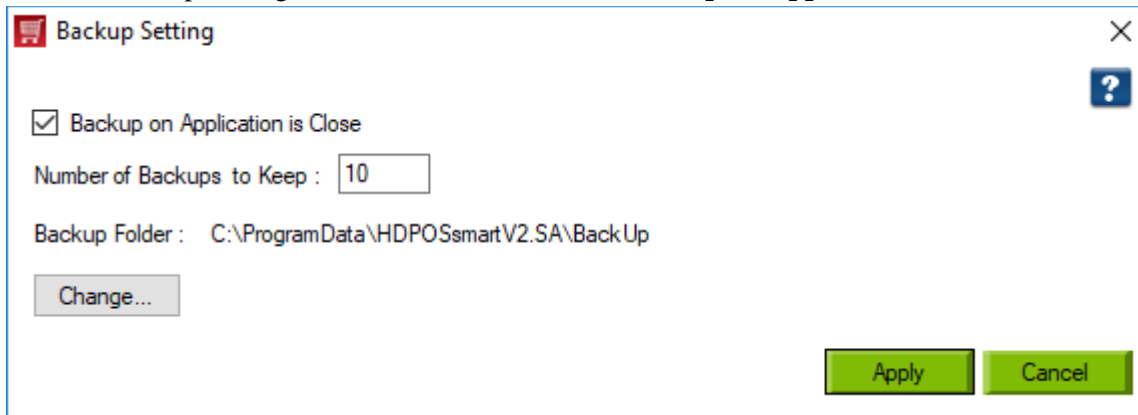

1. Run HDPOS smart. Click on Set-Up button in the main screen.
2. Go to **System Settings** module.

3. From System settings screen, click on **BACKUP**.

4. From Back up Setting screen, check the checkbox **Backup on Application is Close**.

**Backup on Application is Close:** If this is checked ON, then every time the application is closed the database will be backed up in the location specified in Backup Folder.

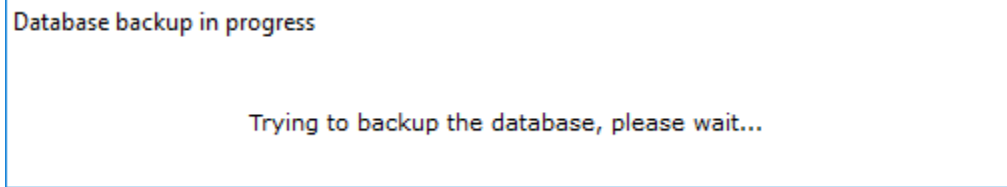

**Number of Backups to keep:** Here you can define how many recent backups to keep in the folder. Here in this example I have specified 10 backups

**Backup Folder:** The database will be backed up in this folder. You can change the location by clicking on “Change” button and chose another location.

5. Click on **Apply**.

6. Go back to main screen and close the application. You will see a message box showing that the database is getting backed up.

7. Go to the location of Back up folder in your computer (path you specified in step 5) and you can see the database back up file as shown below.

8. You will see saved backup files.
